MOÎ. Phylogenet. Evol. 11:351-360(1999).
-!- FOUNCION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX II OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO APP SYNTHESIS (BY SIMILARITY).
-!- COPACTOR: TWO HEME GROUPS (B562 AND B566) WHICH ARE NOT COVALENTLY
BOUND TO THE PROTEIN (BY SIMILARITY).
-!- SHUBINIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESKE PROTEIN (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE CYTOCHROME B PAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      EMBL; AF002284; AAD00345.1; II. Complex (COMPLEX III OR CYTOCHROME B.C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL

COUPLED TO ATP SYNTHESIS (BY SIMILARITY).

COUPLED TO ATP SYNTHESIS (BY SIMILARITY).

COUND TO THE PROYER (BY SIMILARITY).

CHOUND TO THE PROYER (BY SIMILARITY).

CYTOCHROME CI AND THE RIESKE PROYEIN (BY SIMILARITY).

CYTOCHROME CI AND THE RIESKE PROYEIN (BY SIMILARITY).

CHOMILARITY: BELONGS TO THE CYTOCHROME B FAMILY.

-!- FUNCTION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX (COMPLEX III OR CYTOCHROME B-C1 COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO ATP SYNTHESIS (BY SIMILARITY).

-!- COFACTOR: TWO HEME GROUPS (B562 AND B566) WHICH ARE NOT COVALENTLY
BOUND TO THE PROTEIN (BY SIMILARITY).

-!- SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESKE PROTEIN (BY SIMILARITY).

-!- SIMILARITY: BELONGS TO THE CYTOCHROME B FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pfam; PF00033; cytochrome \overline{D} \overline{N}; 1. MOL BIOL: EVO. 14:883-891(1997).

-1- FUNCTION: COMPONENT OF THE UBIQUINOL-CYTOCHROME C REDUCTASE
COMPLEX (COMPLEX III OR CYTOCHROME B-CI COMPLEX), WHICH IS A
RESPIRATORY CHAIN THAT GENERATES AN ELECTROCHEMICAL POTENTIAL
COUPLED TO ATP SYNTHESIS (BY SIMILARITY).

-1- COPACTOR: TWO HEME GROUPS (BSGS AND BSGS) WHICH ARE NOT COVALENTLY
BOUND TO THE PROTEIN (BY SIMILARITY).

-1- SUBUNIT: THE MAIN SUBUNITS OF COMPLEX B-C1 ARE: CYTOCHROME B,
CYTOCHROME C1 AND THE RIESKE PROTEIN (BY SIMILARITY).

"Phylogenetic relationships of neopterygian fishes, inferred from mitochondrial DNA sequences.";
Mol. Biol. Evol. 8:819-834(1991).
-!-FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).
-!-COPACTOR: Binds two heme groups non-covalently. Heme 1 (or BL or b562) is low-potential and absorbs at about 566 nm, and heme 2 (or BH or b562) is high-potential and absorbs at about 566 nm (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Phylogenet. Evol. 11:351-360(1999).
FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).
                                                 similarity).
SUBUNIT: The main subunits of complex b-cl are: cytochrome b,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               STRAIN=Aquarium strain; MEDINE=99214037; PDI=10.1006/mpev.1998.0566; MEDINE=99214037; PubMed=10196077; DOI=10.1006/mpev.1998.0566; Murphy W.J., Collier G.E.; "Phylogenetic relationships of African killifishes in the genera Aphyosemion and Fundulopanchax inferred from mitochondrial DNA

Phylogenet. Evol. 11:351-360(1999).

-!- FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex II or cytochrome b-cl complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).

-!- COFACTOR: Binds two heme groups non-covalently. Heme I (or BL b562) is low-potential and absorbs at about 562 nm, and heme by the book of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            STRAIN=Aquarium strain;

Sci. 18:609-621(2002).
FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex), which is a cespiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).

COPACTOR: Binds two heme groups non-covalently. Heme 1 (or BL or b562) is low-potential and absorbs at about 562 nm, and heme 2 (or BH or b566) is high-potential and absorbs at about 566 nm (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SEQUENCE FROM N.A. van Helden A.L., Baker A.N., Dalebout M.L., Reyes J.C., van Harden A.L., Baker C.S.; Van Waerebeek K., Baker C.S.; "Resurrection of Mesoplodon traversii (Gray, 1874), senior synonym of M. bahamondi Reyes, Van Waerebeek, Cardenas and Yanez, 1995 (Cetacea:

"Molecular systematics and phylogeography of the Plethodon elongatus species group: combining phylogenetic and population genetic methods to investigate species history.";

Mol. Ecol. 13:149-166(2004).

-I-FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).

-I-COPACTOR: Binds two heme groups non-covalently. Heme 1 (or BL or B562) is low-potential and absorbs at about 562 nm, and heme 2 (or BH or b565) is high-potential and absorbs at about 566 nm (By

-!- SUBUNIT: The main subunits of complex b-cl are: cytochrome b,
cytochrome cl and the Rieske protein (By similarity).
-!- SIMILARITY: Belongs to the cytochrome b family.

Mol. Ecol. 13:149-166(2004).

-I-FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).

-I-COPACTOR: Binds two heme groups non-covalently. Heme 1 (or BL or b562) is low-potential and absorbs at about 562 nm, and heme 2 (or BH or b566) is high-potential and absorbs at about 566 nm (By

-!- FUNCTION: Component of the ubiquinol-cytochrome c reductase complex (complex III or cytochrome b-c1 complex), which is a respiratory chain that generates an electrochemical potential coupled to ATP synthesis (By similarity).

-!- COPACTOR, Binds two heme groups non-covalently. Heme 1 (or BL or b562) is low-potential and absorbs at about 562 nm, and heme 2 (BH or b566) is high-potential and absorbs at about 560 nm (By

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      similarity).
-!- SUBUNIT: The main subunits of complex b-c1 are: cytochrome b, cytochrome coronneme c1 and the Rieske protein (By similarity).
-!- SIMILARITY: Belongs to the cytochrome b family.

ALIGNMENTS

AAB68087;

09-JUL-2001 (first entry)

Gastrointestinal epithelial tumour cell; alpha6beta4 integrin; tumour-associated antigen; metastatic disease; malignant disease; tumour typing; tumour screening; tumour.

Synthetic. Macaca fascicularis.

AAB68087 standard; protein; 249 AA

An anti-alpha6beta4 integrin light chain linked to a heavy chain.

RESULT 2 AAR47042 ID AAR47042 standard; peptide; 120 AA.

g

ö The present sequence represents a Monkey antibody light chain linked to a heavy chain. The antibody binds to a target structure displayed in and on the cell surface of human gastrointestinal epithelial tumour cells and in a subpopulation of normal human gastrointestinal epithelial cells. The target structure especially comprises alphaébeta4 integrin. This is a tumour-associated antigen. The antibody, and its fragments, are useful for treating conditions based on anti-angiogenic mechanism in humans. They are useful for treating human metastatic and malignant disease, for in vitvo diagnosis and prognosis of human malignant disease, comprising tumour typing, tumour screening, tumour diagnosis and prognosis and monitoring premalignant conditions. Quantitative in vivo diagnosis is carried out by determining the localization of antibody to Novel antibody for diagnosis, treatment of human metastatic and malignant diseases, has binding structure for target structure displayed on cell surface of human gastrointestinal epithelial tumor and normal cells. .33

The present invention relates to a phage display library of variable heavy domain (VHH or VH) fragments (sdAb fragments) derived from llama antibodies. The library is useful for in vitro selection against any antigen of interest as a target. Single domain anti-idiotypic antibody fragments are isolated from the library using phage display technology and an antibody serving as an antigen. Such anti-idiotypic antibody cragments have great potential in evoking the immune system response to pathological antigens and in vaccine development. The large size of the library considerably increases the probability of isolating from it redetermined target (antigen of interest). The library eliminates the development of anti-idiotypic antibodies by immunisation and allows isolation of anti-idiotypic antibodies. AAU82435-AAU82635 represent the lama heavy chain domain fragments of the invention. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; noctropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer; s disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
New phage display library of variable heavy domain antigen-binding fragments derived from llama antibodies, useful for in vitro selection against any antigen of interest as a target.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

                                                                                   Synthetic
     The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment, and the second region comprises the encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising (I) and recovering (I) from the culture; (5) a composition comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody antibody molecule (I), and formulating the composition, comprising pab optimisation of (I), and formulating the optimised clones; (II) preparing a pharmaceutical composition prepared by method (8). (I) has composition prepared by method (8). (I) has composition prepared by method (8). (I) has composition preparing a planmaceutical composition for the prevention and/or treatment of a disease associated with may also be used in preparing a planmaceutical composition and completed or anyloid plaque formation. The antibody molecule or mayloid plaque formation. The antibody molecule or mayloid plaque formation for the prevention and/or treatment of a disease associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the detection distincertation of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                     New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Argy-His-Asp-CC Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-His-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-CC amino acid sequence Val-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-CC Gly ADA89887 or its fragment. Also described: (I) a nucleic acid molecule CC encoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host culturing the host cell of (2); (4) preparing (I), comprising (I) coll and recovering (I) from the culture; (5) a composition comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), cnocheic acid of (1), vector of (2) or host cell of (3); (7) optimising (1); (8) testing the resulting Fab optimisation library by panning CC against Abeta4Abeta4; (9) identifying optimised clones; (10) expressing composition, comprising optimisation of (1), and formulating the composition arranarad by marhad (2) and (2) a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       pharmaceutical composition prepared by method (8). (1) has necessary to pharmaceutical composition prepared by method (8). (1) has necessary the antibody maltered (8). (1) has necessary the antibody molecule (1), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with mayloidogenesis and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a disease for the detection of the disease mentioned above. The antibody is used for the clisintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaques or for passive immunisation against beta-amyloid plaques for neuropathy, Down's syndrome, clementia, Alzheimer's disease, motor neuropathy, Down's syndrome, amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloidolateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first recipion comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App. Ser-Gly-Tyr ADAB9886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lyg-Leu-Val-Phe-Aha-Glu-Abp-Val-CG Ay ADAB9887 or its fragment. Also described: (I) a nucleic acid molecule cording (I); (2) a vector comprising the nucleic acid of (1); (3) a host coll comprising the vector of (2); (4) preparing (I), comprising (I) coll comprising the vector of (2); (4) preparing (I), comprising (I) control for an antibody molecule produced by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) control for an antibody antipody molecule produced by method (4); (6) a kit comprising (I) control for against Abeta/Abeta4; (9) identifying optimisation library by panning against Abeta/Abeta4; (9) identifying optimised clones; (10) expressing coff selected, optimised clones; (11) preparing a pharmaceutical composition, compressing optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, composition prepared by method (8). (I) has controprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (I), nucleic acid molecule. Control of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is and/or amyloid plaques or for passive immunisation adainst beta-amyloid plaque formation. In particular, the disease is conformation. In particular, the disease is conformation. In particular, the disease is conformation. In particular, the disease is conformation and/or receiptary cereived formation.
                                                                                                                                                                                                                           antibody molecule, antibody; beta-A4 peptide, Abeta4; neuroprotective; noctropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Kretzschmar T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Huber W,
Rothe C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Brockhaus M,

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Cly ADA89887 or its fragment. Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising cell comprising the vector of (2); (4) preparing (I), comprising (I) and recovering (I) from the culture; (5) a composition comprising (I) and recovering (I) from the culture; (5) a composition comprising (I) nucleic acid of (I), vector of (2) or host cell of (3); (7) optimising (I); (8) testing the resulting Fab optimisation library by panning against Abeta/Abeta4; (9) identifying optimised clones; (10) expressing
                                                                                                                                                      ö
                  amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer's disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              õ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antibody molecule capable of specifically recognizing two regions the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                      Gapa

composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a pharmaccentical composition prepared by method (8). (I) has neuroprotective, nootropic and antiparkinsonian activities, and can be neuroprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (I), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or in preparing a pharmaceutical composition for the prevention and/or anyloid-plaque formation. The antibody molecule anyloidogenesis and/or anyloid-plaque formation. The antibody molecule of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is chemitia, Alzheimer's disease, motor neuropathy, Down's syndrome, creutefult Jacob disease, motor neuropathy, Down's syndrome, amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloidosis present sequence is used in the exemplification of the present invention.
selected, optimised clones; (11) preparing a pharmaceutical

```
The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-CS Ear-Gly-Tyx AAA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lya-Lpa-Phe-Phe-Ala-Glu-Aps-Val-Comprision of the fragment. Also described: (1) a nucleic acid molecule cancoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising of (1); (1) and recovering (I) from the culture; (5) a composition comprising (I), and recovering (I) from the culture; (5) a composition comprising (I), conclet acid of (I), and recovering (I) recourted by method (4); (6) a kit comprising (I), or an antibody molecule produced by method (4); (6) a kit comprising (I), conclet acid of (I), and recovering (I), vector of (2) or host cell of (3); (7) optimising (I), conclet acid of (I), and formulating the conclet acid of (I), and formulating the composition, comprising optimisaction of (I), and formulating the composition, composition of (I), and formulating the pharmaceutical composition prepared by method (8). (I) has composition, composition of (I), and formulating the contropic and antiparkinsonian activities, and can be paramaceutical composition of a disease associated with any also be used in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloid-openesis and/or amyloid-plaque formation. The articular, the disease is composition of the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the dementia, Alzheimer's disease, mercention and/or treatment of a disease, associated with anyloid-openesis and/or amyloid-plaque formation. The particular, the disease mentioned above. The antibody is used for the dementia, Alzheimer's disease, mercent neuronal disorders related to adjust the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immuniation; dementia; Alzheimer: a disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Abp-Val-CG Ala AB89887 or its fragment, Also described: (1) a nucleic acid molecule call comprising the vector comprising the nucleic acid molecule call comprising the vector of (2); (4) preparing (I), comprising (I) (2) a vector comprising the nucleic acid of (1); (3) a host coll call comprising (I) (2) and recovering (I) from the culture; (5) a composition comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (1); (1) apprenting (I) or mucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (I) or mucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (I) or mucleic acid optimised clones; (11) preparing a pharmaceutical composition prepared by method (8). (I) has composition prepared by method (8). (I) has composition and/or that antibody molecule with a carrier; and (12) a composition and/or treatment of a disease associated with a carrier or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with the carrier or the detection of the prevention and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a disance associated with the detection of the disease mentioned above. The antibody is used for the detection of the disease mentioned above The antibody is used for the detection of the disease and condition and condition of the disease and c
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    amyorlownic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                    New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       disintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease idementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to agir

antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective; nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Anti-Abeta antibody related amino acid sequence SEQ ID NO:305.

g.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89866 or its fragment, and the second region comprises the amino acid sequence val-His-His-Gln-Lys-Leu-Val-Phe-Ala-Glu-Asp-Val-CG Ay ADA89886 or its fragment, and the second region comprises the concoding (I); (2) a vector comprising the nucleic acid molecule concoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host contraint the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (1); (1) apprimising (I) or nucleic acid of (I), vector of (2) or host (2); (1) apprimised of (I), vector of (2) or host (I); (3); (1) optimising (I) against Abeta/Abeta4; (9) identifying optimised clones; (II) preparing a pharmaceutical composition, composition, composition, composition, composition prepared by method (8). (I) has composition of composition preparing a pharmaceutical composition for used in gene therapy. The antibody molecule with a carrier; and (12) a cused in gene therapy. The antibody molecule (I), uncleic acid molecule cused in gene therapy. The antibody molecule (I) may also be used in preparing a disease associated with a carrier; and common of may also be used in preparing a disease associated with a carrier of the disease mentional dorreatment of a disease associated with a carrier of cit the disease mentioned above. The antibody is used for the cused in preparing a disease of for passive immunisation. Or definitely Alzheimer's disease mentioned prover more apainst beta-amyloid plaque formation. In particular, the disease is concominat ö Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyloirophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention. Alzheimer's disease; motor neuropathy; Down's syndrome; creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; Hu-related dementia; amyotrophic lateral sclerosis; neuronal disorder; aging. New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation Gaps Huber W, Kretzschmar T; Rothe C; ö 74.1%; Score 63; DB 6; Length 120; 76.5%; Pred. The present invention describes an antibody molecule (I) capable of grecifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence val-His-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising culturing the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I), nucleic acid of (I), vector of (2) or host cell of (3); (7) optimising (I); (8) testing the resulting Fab optimisation library by panning against Abeta4; (9) identifying optimised clones; (10) expressing of selected, optimised clones; (11) reparing the composition of (I), and formulating the composition, comprising optimisation of (I), and commulating the composition of composition of (I), and (II) an

pharmaceutical composition prepared by method (8). (1) has neuroprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (1), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloidogenesis and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the disintegration of beta-amyloid plaques or for passive immunisation against beta-amyloid plaques or for passive immunisation

```
The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment, Also described: (1) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising culturing the host cell of (3) under conditions that allow synthesis of (1) and recovering (I) from the culture; (5) a composition comprising (I) and recovering (I) from the culture; (5) a composition comprising (I) nor an antibody molecule produced by method (4); (6) a kit comprising (I), nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising
                                                                                                                                                                                            ö
dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antibody molecule, antibody, beta-A4 peptide, Abeta4; neuroprotective, nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer: disease; motor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;

composition, comprising the featuring factory of selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, composition prepared by method (8). (1) has contropic and antibody molecule with a carrier; and (12) a contropic and antibody molecule with a carrier; and can be contropic and antibody molecule of contropic and antibody molecule of contropic and antibody molecule of used in gene therapy. The antibody molecule of contropic and optimized of caid molecule, wettor or host is useful in preparing a pharmaceutical composition for the prevention and/or reatment of a disease associated with anyloid-plaque formation. The antibody molecule of the prevention of better amyloid-plaque formation. The antibody molecule of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is dementia, halzheimer's disease, motor neuropathy, Down's syndrome, creutzfeldt Jacob disease, motor neuropathy, Down's syndrome, amyloidesis Dutch type, Parkinson's disease, HIV-related dementia, amyloidesis Dutch type, Parkinson's disease, related dementia, amyloidesis Dutch type, Parkinson's disease, related dementia, camyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.

New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation (e.g. dementia)

Example 13; Page 92; 312pp; English.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The specifically recognising two regions of the beta-A4 peptide/Abeta4. The specifically recognising two regions of the beta-A4 peptide/Abeta4. The specifically recognising two regions of the second region comprises the amino acid sequence Val-Has-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-App-Val-CG anion of the sequence Val-Has-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-App-Val-CG all comprising the vector comprising the nucleic acid of (1); (3) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1); comprising (1) or an antibody molecule produced by method (4); (6) a kit comprising (1); or an antibody molecule produced by method (4); (6) a kit comprising (1); or nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (1); or nucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (1); (8) testing the resulting Pab optimisation of (1); and formulating the composition, comprising optimisation of (1); and formulating the composition, comprising optimisation of (1); and formulating the composition prepared by method (8). (1) has a paramaceutical composition prepared by method (8). (1) has a paramaceutical composition preparing a pharmaceutical composition for the prevention and/or amyloid-plaque formation. The antibody molecule (1), nucleic acid molecule, any also be used in preparing a disease associated with any also be used in preparing a disease associated with any also be used in preparing a disease sesociated with against beta-amyloid plaque or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is centrafeld Jacob disease, hereditary cerebral haemorhage with anyloidosia butch type, parkinson's disease related dementia, and content of the disease, nector neuropathy. Hurrelated dementian content is used in the exemplification of the present invention.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-App-Ser-Gly-Tyr ADA99886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Ala-Glu-Asp-Val-Gly-Aba98887 or its fragment. Also described: (I) a nucleic acid molecule coll comprising the vector comprising the nucleic acid of (I); (3) a host cell comprising the vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising (I) con antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule produced by method (4); (6) a kit comprising (I) or an antibody molecule with a carrier; and (II) expressing collising the resulting Pab optimisation of (I); (I) add parmaceutical composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition, comprising optimisation of (I), and formulating the optimised antibody/antibody molecule with a carrier; and (12) a composition prepared by method (8). (I) has contropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (I), nucleic acid molecule (I) cused in gene therapy. The antibody molecule of a disease associated with a may also be used in preparing a disease associated with a may also be used in preparing a disease associated with a disease is and/or amyloid-plaque formation. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody are amyloid plaques or for passive immunisation capainst beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.

New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation (e.g. dementia)

Example 13; Page 92; 312pp; English.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence val-His-Glu-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising culturing the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I), comprising the vector of (2) or host cell of (3); (7) optimising (I), concleic acid of (1), vector of (2) or host cell of (3); (7) optimising (2) or an antibody molecule produced by method (4); (6) a kit comprising (I), composition, comprising perminance cell of (3); (7) optimising (2) or an antibody/Antibody/Antibody, mothod (1), and formulating the resulting selected, optimised clones; (10) preparing a pharmaceutical composition, composition of (1), had formulating the composition optimised antibody/Antibody, mothod (2), had formulating the composition of (2), had formulating the composition of (2), had formulating the composition of (2) had formulating the composition of (2) had formulating the composition of (3) had formulating the co pharmaceutical composition prepared by method (8). (1) has neuroprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (1), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloidogenesis and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a diagnostic composition for the disease mentioned above. The antibody is used for the detection of the disease mentioned above. The antibody is used for the

Example 5; Page 64; 312pp; English.

The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising culturing the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I)

New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating

```
The present invention describes an antibody molecule (I) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Gilu-Phe-Asg-His-Asg-Gar-Gily-Tyr ADA8986 or its fragment, and the second region comprises the amino acid sequence val-His-His-Gilu-Lys-Leu-Val-Phe-Phe-Ala-Gilu-Apsp-Val-Gily ADA89887 or its fragment. Also described: (1) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host call of (3) under conditions that allow synthesis of collutring the host call of (3) under conditions that allow synthesis of collutring the host call of (3) under collutre; (5) a composition comprising (I), on an antibody molecule produced by method (4); (6) a kit comprising (I), on collutring the resulting fab optimisation library by panning (I), and feathAbeta4; (9) identifying optimisation library by panning of selected, optimised clones; (11) reparing a pharmaceutical composition prepared by method (8). (1) has composition composition for composition of (1), and formulating the optimised antibody/antibody molecule with a carrier; and (12). a pharmaceutical composition prepared by method (8). (1) has composition for the prevention and/or tannopared by method (8). (1) has composition for the prevention and/or mayloid-plaque formation. The antibody molecule of a disease associated with amyloid-plaque formation. The antibody molecule of the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease is composition in particular, hashaimer's disease, mercinary crebers headed encomposition of the prevention of beta-amyloid plaques or for passive immuniation.

Creutzfeldt Jacob disease, meterial sclerosis or neuropal disease, meterial sclerosis or neuropal disease in the prevention of the

New antibody molecule capable of specifically recognizing two regions of the beta-A4 peptide, useful for diagnosing, preventing or treating diseases associated with amyloidogenesis or amyloid-plaque formation (e.g. dementia).

Example 16; Page 270; 312pp; English.

amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention. may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the distincentation of beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.

```
The present invention describes an antibody molecule (I) capable of gracing the present invention describes an antibody molecule (I) capable of first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Agp-Grafty ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Glu-Na-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment, Also described: (I) a nucleic acid molecule encoding (I); (2) a vector comprising the nucleic acid of (I); (3) a host cell comprising the vector of (2); (4) preparing (I), comprising of culturing the host cell of (3) under conditions that allow synthesis of (I) and recovering (I) from the culture; (5) a composition comprising (I), nucleic acid (I), vector of (2) or host cell of (3); (7) optimising (I); (8) testing the resulting Rab optimised clones; (10) expressing of selected, optimised clones; (11) reparing a pharmaceutical composition, comprising optimisation of (I), and formulating the composition of (I), and (I2) and (I2
                                                                                                                                                                                                                                                                                                                                                                                                                nootropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; Alzheimer: d disease; mctor neuropathy; Down's syndrome; Creutzfeldt Jacob disease; hereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antibody molecule capable of specifically recognizing two regions of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-A4 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-Ser-Gly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89887 or its fragment. Also described: (1) a nucleic acid molecule encoding (1); (2) a vector comprising the nucleic acid of (1); (3) a host cell comprising the vector of (2); (4) preparing (1), comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nocropic; antiparkinsonian; gene therapy; amyloidogenesis; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; amyloid-plaque formation; beta-amyloid plaque; immunisation; dementia; allateniers g disease; mereditary cerebral haemorrhage; amyloidosis; Parkinson's disease; HIV-related dementia; amyotrophic lateral sclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibody molecule capable of specifically recognizing two regions of
the beta-A4 peptide, useful for diagnosing, preventing or treating
diseases associated with amyloidogenesis or amyloid-plaque formation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antibody molecule; antibody; beta-A4 peptide; Abeta4; neuroprotective;

```
The present invention describes an antibody molecule (1) capable of specifically recognising two regions of the beta-44 peptide/Abeta4. The first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Ampport Ser-Cly-Tyr ADA89886 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-Gly ADA89880 or its fragment, and the second region comprises the cocding (1); (2) a vector comprising the nucleic acid of (1); (3) a host coll comprising the vector of (2); (4) preparing (1), comprising of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3) under conditions that allow synthesis of culturing the host cell of (3), weetor of (2); (4) preparing (1); (5) a host conditions that allow synthesis of conditions that allow synthesis of culturing the host cell of (3), vector of (2) or host cell of (3); (6) a kit comprising (1) or an antibody molecule produced by method (4); (6) a kit comprising (1); (8) testing the resulting Fab optimised clones; (10) expressing (1); (8) testing the resulting Fab optimised clones; (10) expressing confinised antibody/antibody molecule with a carrier; and (12) a composition, comprising optimisation of (1), and formulating the coptimised antibody/antibody molecule with a carrier; and (12) a composition confort is used in gene therapy. The antibody molecule (1), nucleic acid molecule. Coptimised composition preparing a pharmaceutical composition for mayloid-plaque formation. The antibody molecule conforts and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (1), nucleic acid molecule conformation and/or amyloid-plaque formation. The antibody molecule confused above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The antibody is used for the disease mentioned above. The an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The present sequence represents an antibody variable heavy chain (VH) fragment. The fragment is used to produce a mixture or panel of 5 different specific binding members, each comprising an antibody VH and/or VL variable domain and capable, when displayed on the surface of filamentous bacteriophage particles or in the case of a specific binding member comprising the D5 VH and/or VL variable domain when bound to human service is useful for the selection of specific binding members with a desired property such as ability to cross BBB, ability to bind with a desired property such as ability to cross BBB, ability to bind intamention in the brain or BBB breakdown or ability to bind areas of intracellular adhesion molecules and to bind transferrin receptor. The animal body, including neurological diseases, such as Alzheimer's disease, prion disease, involving inflammaticn occurring within the brain injury and any diseases involving inflammation occurring within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                     Mixture or panel of antibodies for selecting specific binding member that cross the blood brain barrier, for use in delivering different molecules and treating neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 61; DB 4; Length 121; Pred. This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell cytostatic, immunosuppressive, immunostimulant, immunomodulatory, orbitication and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiALDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43399-ABP47228 represent the antibodies and fragments of the antibodies described in the method of
                                                                                                                                                                                                                      Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  0; Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          GENERAL INFORMATION:

Patent No. 6255455

GENERAL INFORMATION:

PAPLICANT: SIGGE,

TITLE OF INVENTION: 80KTING METHOD FOR PRODUCTION THEREOF

TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF

FILE REFERENCE: 09596-42U2

CURRENT FILING DATE: 1999-01-29

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/081,380

EARLIER APPLICATION NUMBER: 60/028,550

EARLIER FILING DATE: 1996-10-11

NUMBER OF SEQ ID NOS: 224

NUMBER OF SEQ ID NOS: 224

Sequence 4, Application US/09240274

Patent No. 6255455
GENERAL INFORMATION:
APPLICANT: Siegel, Donald L.
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
FILE REFERENCE: 09596-42U2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ;

                                                                                                                                                                                                                                                                                                        Sequence 7, Application US/09240274

Patent No. 6255455
GENERAL INFORMATION:
APPLICANT: Siegel, Donald L.
TITLE OF INVENTION: Rh(D)-BINDING PROTEINS AND MAGNETICALLY ACTIVATED CELL
TITLE OF INVENTION: SORTING METHOD FOR PRODUCTION THEREOF
FILE REFERENCE: 09596-42U2
                                                                                                                                Gaps
